

FAISAL ALHUZALI

Computer Science Graduate | DevOps & Cloud | IT Infrastructure

Riyadh · Saudi Arabia | faisalalhuzli@gmail.com | [+966 58 040 8646](tel:+966580408646) | linkedin.com/in/faisalalhuzali | falhuz.github.io/portfolio.html

PROFESSIONAL SUMMARY

Computer Science graduate with a 4-month system administration traineeship supporting 100+ users in a Windows Server environment. Building a transition toward Junior DevOps and Cloud roles through AWS training, Linux practice, and Python project development. Practical foundation in Active Directory, DNS, DHCP, patch management, incident troubleshooting, and technical documentation.

TECHNICAL SKILLS

- **Operating Systems:** Windows Server, Windows 11, Linux, Debian
- **Infrastructure:** Active Directory, Group Policy, DNS, DHCP, TCP/IP, VMware vSphere, VirtualBox, PDQ Deploy, Patch Management
- **Cloud & Security:** AWS Fundamentals, AWS IAM, AWS EC2, AWS S3, IAM concepts, Endpoint Security, Basic cybersecurity concepts
- **Scripting & Tools:** Python (beginner / developing), Bash, PowerShell (personal projects/labs only), SQL, Git, GitHub

WORK EXPERIENCE

Saudi Food & Drug Authority (SFDA) — Riyadh | System Administrator (Traineeship) | Sep 2025 – Dec 2025

- Supported 100+ users during a 4-month system administration traineeship by administering Active Directory accounts, permissions, password resets, and department changes.
- Maintained software and patch readiness for 100+ users by deploying applications and updates with PDQ Deploy.
- Resolved connectivity issues across 3 areas — network, DNS, and DHCP — by performing troubleshooting, Root Cause Analysis, and escalation when required.
- Standardized incident troubleshooting and system monitoring tasks by creating 2 documentation types — runbooks and technical documentation.

PROJECTS

Python DevOps Server Health Monitor | Personal Project

- Built 1 Python-based server health monitor for 3 resource types — CPU, memory, and disk — by writing scripts on Linux / Debian using psutil.
- Produced structured health output in 1 JSON format by implementing health status classification logic.
- Validated health status logic using Pytest and managed project code using Git and GitHub.

Windows Server Infrastructure Lab | Home Lab

- Built 1 Windows Server 2022 virtual lab with a domain controller and client environment using VirtualBox.
- Configured 4 identity and network components — Active Directory Domain Services, DNS, DHCP, and TCP/IP — to test authentication and connectivity.
- Applied password policy settings, Active Directory users, and OUs to simulate basic enterprise user management.

EDUCATION

Bachelor of Computer Science Taif University | Graduation: 2026

CERTIFICATIONS

- AWS Certified Cloud Practitioner | Amazon Web Services
- DevOps on AWS Specialization (Code/Build/Test, Release/Deploy, Operate/Monitor) | AWS
- DevOps - Level 1 Learning Pathway | Saudi Digital Academy
- IBM DevOps Essentials | IBM
- ISO 9001:2015 Lead Auditor Training
- Google Cybersecurity Professional Certificate | Coursera (In Progress)
- Registered Specialist — Computer Science | Saudi Council of Engineers (SCE)
