

FAISAL ALHUZALI

Computer Science Graduate | DevOps & Cloud | IT Infrastructure
[+966 58 040 8646](tel:+966580408646) | faisalalhuzli@gmail.com | LinkedIn [FAISAL ALHUZALI](#)

Professional Summary

Computer Science graduate with practical systems administration experience and a strong foundation in IT infrastructure. Transitioning into DevOps and Cloud engineering, supported by hands-on training in AWS and Python scripting. Proven ability to support 100+ users, troubleshoot system incidents, and maintain Windows Server environments while actively developing cloud deployment and automation skills.

Work Experience

Saudi Food & Drug Authority (SFDA) — Riyadh | System Administrator (Traineeship)

Sep 2025 – Dec 2025

- Administered and supported a Windows Server environment for 100+ users, managing user accounts, password resets, permissions, and department changes via Active Directory.
- Deployed software and managed patch cycles using PDQ Deploy, ensuring endpoints remained secure and up to date.
- Configured and maintained Group Policy Objects (GPO) and Software Restriction Policies to enforce security standards across the network.
- Troubleshoot network, DNS, and DHCP issues, performing Root Cause Analysis (RCA) and escalating complex incidents to senior engineers.
- Monitored system and application health, creating technical documentation and runbooks to standardize incident response and system maintenance.
- Assisted in the management of VMware vSphere virtual machines and supported daily IT infrastructure operations.

PROJECTS

Python DevOps Server Health Monitor | Personal Project Windows Server Infrastructure Lab | Home Lab

- Developed a Python script on Linux (Debian) using the psutil library to monitor real-time CPU, memory, and disk utilization.
- Implemented health status classification logic to categorize server performance and output structured JSON data.
- Wrote unit tests using pytest to validate logic reliability and managed source code version control via Git and GitHub.

Windows Server Infrastructure Lab | Home Lab

- Built a virtualized Active Directory environment using VirtualBox and Windows Server 2022 to simulate enterprise authentication.
- Configured Domain Controllers, DNS, DHCP, TCP/IP networking, custom password policies, and Organizational Units (OUs).

Education

Bachelor of Computer Science | Taif University

Certifications & Courses

- AWS Certified Cloud Practitioner – Amazon Web Services
- DevOps on AWS Specialization (Code/Build/Test, Release/Deploy, Operate/Monitor) – AWS
- DevOps – Saudi Digital Academy
- IBM DevOps Essentials – IBM
- ISO 9001: Lead Auditor Training – 2015
- Google Cybersecurity Professional Certificate – Coursera (In Progress)
- Registered Specialist – Computer Science

Technical Skills

- Operating Systems: Windows Server, Windows 11, Linux (Debian)
- Infrastructure & Systems: Active Directory, Group Policy, DNS, DHCP, TCP/IP, VMware vSphere, VirtualBox, PDQ Deploy, Patch Management
- Cloud & Security: AWS (IAM, EC2, S3), Endpoint Security, Basic Cybersecurity, IAM Principles
- Programming & Scripting: Python (Beginner/Developing), Bash, PowerShell (Labs/Personal), SQL
- DevOps & Tools: Git, GitHub, Incident Troubleshooting, System Monitoring, Technical Documentation, Runbooks.
